

# Moving Forward With Password-Free Security Through Biometrics

Biometric authentication ensures secure entry and data access based on human information such as DNA, fingerprints, eye scan, etc.

Biometric identifiers are unique to a person.

Biometric identifiers may be physical or behavioral components e.g. pressure exerted while typing.

Secure on-device storage of biometric information instead of cloud reduces chances of hacking.

Biometric data is difficult to replicate for example facial scan may require a person to blink in addition to facial features recognition.
