

DDoS Attacks & Its Various Types

DDoS attacks are a malicious attempt to disrupt the usual traffic of the server by flooding it with massive internet traffic to make it unavailable to users.

Types of DDoS Attacks

NTP Amplification

Zero-day DDoS Attacks

Smurf Attack

Ping of Death

Fraggle Attack

Advanced Persistent DoS

Slowloris

SYN Flood

UDP Flood

HTTP Flood

Mitigation Of These Attacks

- When you're running your own servers, try to learn more about your website's traffic to know when you're under attack in order to try to limit the damage caused.
- Enroll a team of people who are specified in this field. The team should be responsible for taking suitable action if you come under an DDoS attack.
- During a DDoS attack, the best way to keep your servers & website online is by contacting the DDoS mitigation company.
